

New times,
different investments.

ICAM, artificial
intelligence
at your service.

ICAM is a revolutionary investment service, based on artificial intelligence, adapted to the reality and needs of the modern investor. ICAM Corporation is an international company, present in Romania since 2019, which, in the middle of 2020, reports profit in all accounts of its partners, although the unprecedented crisis caused by the Coronavirus pandemic has put in difficulty all the known investment funds.

To find out how it is possible for an investor to make a profit in times of crisis, we have invited to an interview Cristian Păuna, Managing partner and Claudiu Costin, Marketing partner of ICAM, as we find out on icam.one.

that what we spent together as children will bring us together. We went on different paths, and after decades, each one's experience complements the other's. ICAM was born naturally. My artificial intelligence matched Claudiu's emotional intelligence.

Is ICAM a profitable service in times of crisis?

Costin Claudiu: It is! We are on profit in all our partners' accounts, and in large capital accounts, we have a profit of over 5% made during the Corona crisis. In total, we registered in the professional accounts a profitability of 72% in the last twelve months, meaning 6% per month. Nice, isn't it?

How did you meet? How did you end up doing ICAM?

Cristian Păuna: We met 42 years ago, in the first grade of a general school in the Drumul Taberei neighborhood of Bucharest. There we nestled for a while on the same bench, not knowing that

What is ICAM?

Cristian Păuna: The initials ICAM come from Investment Capital Account Management. It is an investment service based on artificial intelligence that any investor can purchase to generate profit in his capital account. I am the author of a complex software system, which makes automatic investments in capital markets. This software, called the Server, is the basis of the ICAM service.

ICAM, automated investment service

What do you mean by a very complex computer system?

Cristian Păuna

“ ICAM is a personalized service, depending on each investor's profile.

Cristian Păuna: theServer is a system made by 50 programs that include over 2400 artificial intelligence algorithms that search for real-time opportunities in 17 capital markets. The system performs an average of 6.6 million instructions per second, is managed by four servers, performs several thousand transactions per year, has been operating for over ten years, and is profitable throughout this period.

How do these algorithms work?

Cristian Păuna: Price variation over time is a phenomenon that can be mathematically modeled. I am the author of some real-time data mining

models that identify opportunities in the market. They are based on the price cyclicity and periodicity, on the analysis of the price growth probability, and the precise identification of minimum or maximum risk intervals. The methods we use are my algorithms, based on real-time price action, developed and tested over two decades, and which proved to be reliable and profitable.

How do you make a profit in the crisis?

Cristian Păuna: The ICAM service does not involve to buy shares and keep it for the long-term. The ICAM service makes several thousand small investments every year to make a profit. These are performed as contracts on differences, through authorized brokers, a feature that allows us to use special methods of hedging and automatic risk management. On average, only 15% of transactions are dosed negatively, the remaining 85% being profitable, due to the special data-mining methods used to enter and exit the market. This report allows us to dose a negative position only after other positive ones have already recovered that loss. Thus the capital balance does not decrease. Being engaged in investment activity, we are not pressured at any time, having enough methods to optimize the results.

The capital is in the investor's account

Where is the capital? How does the investment work?

Costin Claudiu: Here comes the interesting part. The investor's money remains permanently in his capital account, opened with one of the authorized brokers with which the ICAM service is connected. Once the ICAM service contract is signed, the trading signals are sent by theServer software directly to the broker. It turns them into market orders and executes them in less than a second. The generated profit is accumulated in the ICAM partner account.

How much is the investor risk?

Claudiu Costin

“ ICAM offers investors a completely automatic investment solution that works with the money in the investor's 'pocket'.

Costin Claudiu: The investor decides the risk that is acceptable to him, ranging between 10% and 30% of the capital. In addition to this overdraft of agreed capital, there is a percentage that we call passive capital overdraft, between 10 and 20%. It is a reserve used only in exceptional cases, such as the crisis generated by Coronavirus. The higher the assigned risk, the higher the profit obtained.

How much does the ICAM service cost?

Costin Claudiu: ICAM service costs nothing. We collect from the investor 50% of the profit that we have made in his account. If we do not record a profit in a certain period, we practically do not invoice anything, and the investor has nothing to pay. In the last 8 years, there have been only 7 or 8 months in total in which we have not generated profit.

The capital is anytime available to the investor

Are you more profitable than mutual funds?

6%

ICAM service monthly efficiency

Costin Claudiu: With over 72% gross profit recorded in the last 365 days, meaning an average of 6% per month, I don't even think we can make any comparison with any investment fund in the world. In addition, with ICAM, the money is in your account, not in the account of any other company.

Does ICAM bring other advantages over traditional mutual funds?

Costin Claudiu: Unlike any financial mutual fund, ICAM partners do not have the money blocked for a certain period of time, he enjoys instantly the profit made, and he does not suffer any penalty if he withdraw amounts of profit or capital during the investment. Besides, the investor may terminate the contract unilaterally, at any time, without any penalty. I know for sure that no mutual fund in the world offers the profit level we make. Moreover, ICAM service can be tested by any investor as long as he wants, before making a serious investment plan.

Who are the ICAM partners?

Claudiu Costin: ICAM partners are investors, individuals, or companies that have a minimum of 100,000 euro plus the used risk and want to make a profit while keeping the capital in liquid form in their own investment account. We have a personalized approach for each of the investors, and the ICAM contract is strictly confidential, both in terms of the names of our partners and the amounts invested by them.

How do investors find you?

Costin Claudiu: We'd rather find them. Somehow the ICAM service is, at first sight, "too good to be true", and we are initially greeted with a lot of suspicions. But once the investor understands that the money is in his account, that he has control over the deposit and withdrawal of money from the account, without any time restriction and without any penalty from ICAM, the situation develops nicely for both partners. The detailed description of the ICAM service, the performance obtained, and of course our contact details, you can find at icam.one.
